Personal Development Plan

Name : Girish N

Registration number:2511021061084

Overall goal	Development and opportunity	What I will achieve	Resources and support needed	What success looks like
Java programming Python programming Table tennis Volleyball	Developing programming skills in Java and Python builds strong logical, technical, and problem-solving abilities. It helps me learn versatile coding practices for software and data projects. Combining this with sports develops physical fitness, discipline, teamwork, and quick reflexes.	I will achieve strong technical skills to design and build software applications. I will also develop physical fitness and the ability to participate in sports. This creates a balanced profile of mental and physical development, opening doors to tech companies and a healthier lifestyle.	I will need access to tools like a good laptop, Java/Python IDEs, and online learning platforms such as YouTube or Udemy. For sports, I'll need access to courts, equipment, and clubs. Support from mentors, online coding communities, and teammates will help me grow.	Success looks like creating my own functional and polished software projects that showcase my skills. In sports, it means playing competent games and understanding strategy. It also means building a strong technical portfolio that helps me land internships or start earning through freelance work.
